

ReSharper Benefits For You and Your Business

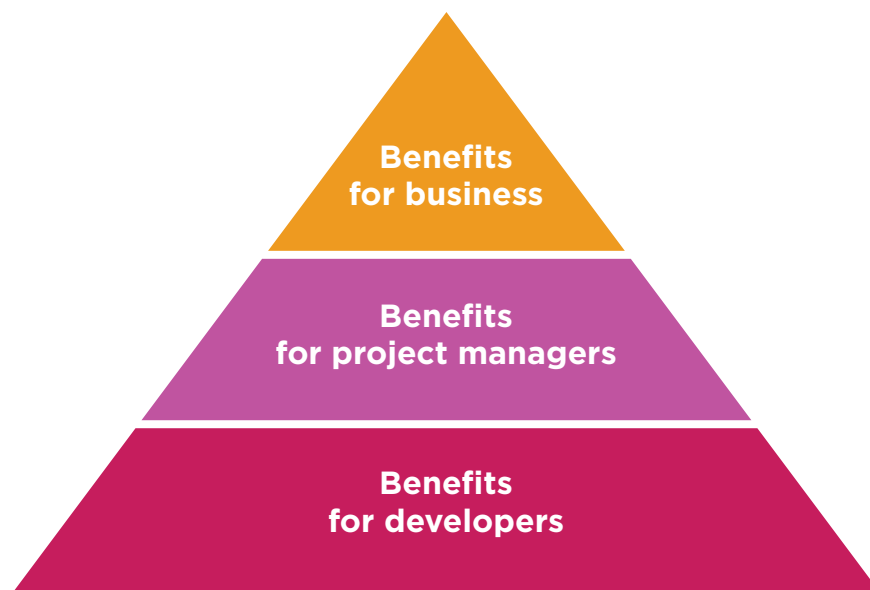

ReSharper is the most intelligent productivity tool for .NET development.

However, it proves to be a great asset not only for software engineers, but also for your whole software development business.

ReSharper brings the necessary intelligence, code insight and productivity to give your business a competitive advantage on three organization levels:

- **Benefits for developers**
- **Benefits for project managers**
- **Benefits for business**

These benefits only get better with each new ReSharper release, due to ongoing performance improvements and added functionality. For example, recent versions of ReSharper have introduced ReSharper Build, which finds ways to reduce compilation time in Visual Studio, as well as new code inspections and refactorings. Even as Microsoft makes improvements to new releases of Visual Studio, ReSharper stays way ahead of the curve.

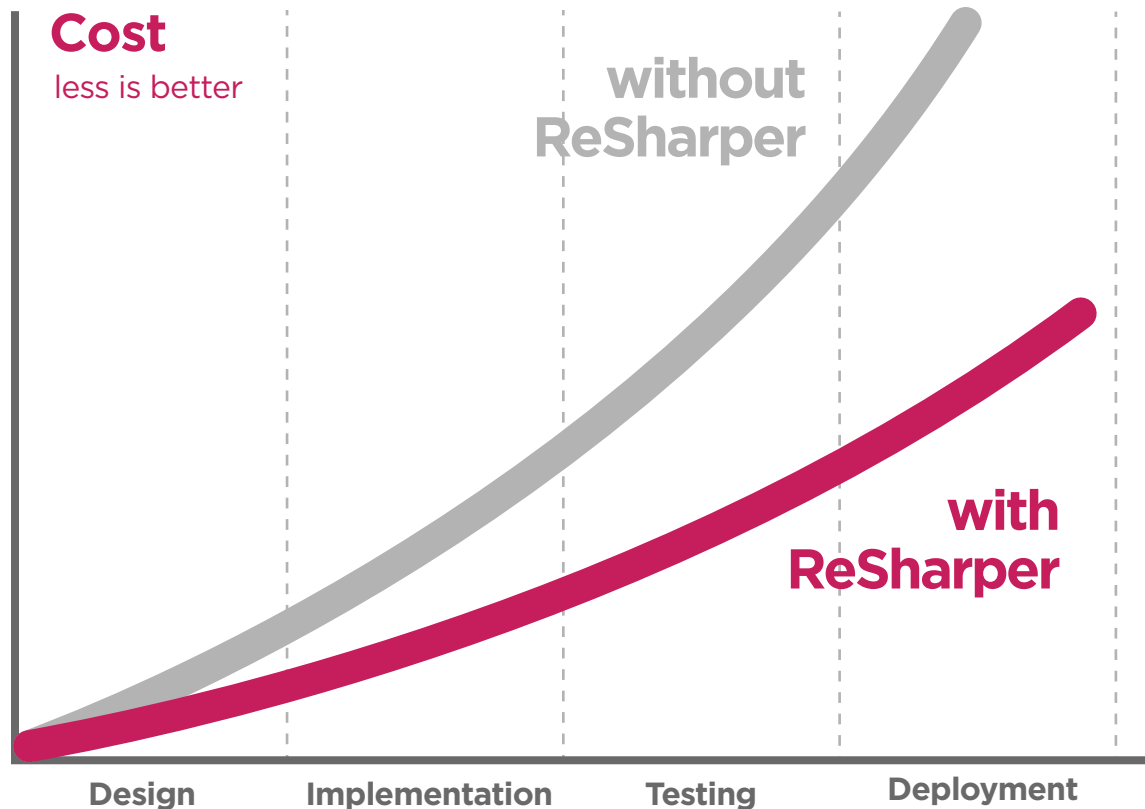

Benefits for developers

- Save time on compilation, locating & fixing errors
 - ReSharper instantly detects and highlights errors in your code and allows automatic corrections for most errors
- Automate routine tasks
 - Quickly create methods, properties, variables or classes from their usages, generate constructors, properties, delegating and equality members; implement and override members; and much more
- Get useful hints right when you need them
 - IntelliSense, including code completion and quick parameter information
- Improve your coding practices
 - Change is easy — with 40+ solution-wide, cross-language refactorings (nearly 6 times as many as in Microsoft Visual Studio, and growing), additional 250+ automated code transformations, and code cleanup
- Navigate to any corner of your solution
 - Reach any part of your code within seconds, with dozens of smart navigation and search features
- Handle multi-language solutions with ease
 - Refactorings, navigation and search, and coding assistance work across C#, VB.NET, XAML, ASP.NET, TypeScript, JavaScript, CSS and more languages

Benefits for project managers

- Have new code developed faster, with higher quality & maintainability and fewer errors
- Simplify understanding, updating and refactoring existing code
- Feel confidence in change
- Promote teamwork and improve team management
- Ensure compliance with company- or team-wide coding standards

As project completion moves through its stages, the cost of correcting errors grows exponentially. For example, a bug discovered during testing may require changes on the design and architecture level, leading to much greater costs. ReSharper allows you to reduce the expenses of making changes, and in many cases sharply cuts the incidence of costly errors.

Benefits for business

Remarkable Return On Investment (ROI)

- ReSharper users report a 20-50% increase (with some individual gains of up to 350%!) in their productivity when using ReSharper on top of Visual Studio.
- If a developer hourly wage is \$30-50, it can take ReSharper only 7 working days to pay for itself.
- Here is an estimated ReSharper ROI use case based on a mid-size project:

Project Methodology	Developer Productivity	Effort	Hourly Wage	Project Cost	Investment	Savings
Without ReSharper	100%	8 developers 40 person-weeks	\$40	\$64,000	\$0	\$0
With ReSharper	135%	8 developers 30 person-weeks	\$40	\$48,000	\$8 licenses x \$300 = \$2,400	\$16,000 - \$2,400 = \$13,600

Make your development more cost-effective

- Producing higher-quality code with ReSharper means you eradicate a lot of the problems that require reworking code, and reap the additional savings

Meet delivery schedules

- Help your project managers meet delivery deadlines by making your developers more productive

Utilize your resources more efficiently

- Deliver larger projects faster — with the same team size

Enjoy the low cost of ownership

- Easy deployment with Visual Studio, no investment in additional hardware and software required
- Flexible licensing and renewal policies, free technical support

Our Clients talk about ReSharper

“As far as I’m concerned, Visual Studio without ReSharper is like driving a Mustang with a lawn mower engine. You can do it but who would want to?”

Ray Megal,
Senior Programmer Analyst
M&I Investment Management Corp.

“[ReSharper] is the one thing for .NET developers that removes fear of change. Refactoring is just so darn easy that change isn’t scary.”

David Starr,
Chief Software Architect,
Healthwise, Inc

“To me my value to a customer is providing the maximum productivity that I can, and for me that productivity comes from using this tool... The way I code works perfectly within the way ReSharper aids me in being productive. It grants me a fluid motion to refactoring and code efficiency and helps me get into a groove when I code. A groove that is both productive and efficient and fun.”

Bil Simser,
Independent Solutions Architect Consultant,
MVP
